Quick guide to setup ssh keys for GitHub on a new machine

This guide is just a condensed version of the guide from GitHub, here, and here.

1. Create a new ssh key:

   ```
   ssh-keygen -t ed25519 -C "your_email@example.com"
   ```

2. Add the new key to your ssh agent (macOS)

   - Start the agent

     ```
     eval "$(ssh-agent -s)"
     ```

   - Edit the config

     ```
     vim ~/.ssh/config
     ```

   - Add the following text

     ```
     Host *.github.com
       AddKeysToAgent yes
       UseKeychain yes
       IdentityFile ~/.ssh/id_ed25519
     ```

   - Add the key to your apple keychain

     ```
     ssh-add --apple-use-keychain ~/.ssh/id_ed25519
     ```

3. Copy your *public* ssh key

   ```
   `pbcopy < ~/.ssh/id_ed25519.pub`
   ```

   or,

   ```
   `cat ~/.ssh/id_ed25519.pub`
   ```

   and copy in the usual way.

4. Add the public key to your keys on Github.com
